

Product Advantages

Typical installation illustration: standpipe installed complete with concrete ring grave for the control spilled water

- Robust construction
- Mechanical components only
- Minimal maintenance required
- Improved standpipe functionality
- Easy access for drums and buckets
- Field maintenance simple and quick
- Water only dispensed when someone depresses the lever
- Clean and dry environment as the porous gravel assist with drainage
- Pressure management is possible if used in conjunction with the aqua-loc WDMS (water demand management system)
